

Want More Site Visits..? Show Your Newsfeeds!

Revolutionizing XML/RSS Feed Playback for Organizations

Netpresenter's Newsfeed Server is the first behind-the-firewall enterprise-strength solution that shows relevant internal and external RSS feeds securely on virtually any screen; as Screen Saver, instant emergency alert notification, on desktops and on TV screens.

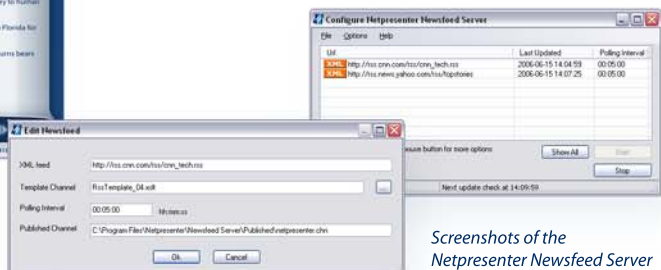

Tired of waiting for visits on your website, web log, news clipping service, or Intranet? Want to bring more traffic to your website? Now you can show your feeds on all your screens, with the Enterprise Strength Netpresenter Newsfeed Server! Show your Intranet headlines, news clippings and industry web logs automatically on every screen at your organization.

Netpresenter Player showing an interactive Slide Show Presentation of an XML/RSS Feed Easily add your own template graphics.

Key Features

- Enterprise strength XML/RSS proxy server application designed for 24/7/365 usage.
- Displays feeds as interactive PC Screensaver, on the PC Desktop, on large screens (Digital Signage/Narrowcasting), Webpage's, or as instantly visible Emergency Alert Broadcast.
- Convert XML/RSS feeds into full Netpresenter slideshow (channels), web pages or any other script based format using industry standard XSLT's (Extensible Stylesheet Language).
- Easily add your own template graphics.
- Display your Intranet, web log or favorite websites in seconds on Netpresenter Players by dragging the XML/RSS feed in the Newsfeed Server.
- Saves precious bandwidth by caching XML/RSS feeds (proxy).
- Unlimited amount of feeds.
